HOW CAN NETSYMM IMPROVE YOUR BUSINESS?

If your sales and procurement functions are conducted using phone, fax and email, you may be incurring unnecessary costs e.g. manual order process, no visibility of your transactions, fixing data entry errors, over-ordering inventory that has limited shelf life, or reworking invoices to match proof of delivery. No global business today can afford to lose time and/or money with a substandard supply chain process.

NETSYMM FITS YOUR BUSINESS

Unlike large corporate ERP vendors, NetSymm understands the needs of fast growing global mid-market customers. We deliver a stable, secure and extensible solution to get your supply chain integrated with buyers and suppliers, streamlining operations and reducing costs. We can start with a small SaaS footprint and support your fast growth without imposing high costs and complexity.

WHY START NOW?

Your dynamic mid- to large-cap business is probably constrained only by your manual business processes and working capital needs. If you can make inventory turns more efficient, and invoicing speed faster, you can increase capital efficiency and this will result in faster business growth. NetSymm understands this, and will quickly set you up with your digital supply chain, to deliver cost savings & increased working capital.

"We tried many sales automation solutions, but they didn't work for a variety of reasons. Then we found NetSymm and knew it was the real deal. Our order entry errors went down by 30%."

Invoice

Buyer ERP System

AUTOMATION

Transaction processing: Create and place purchase orders using NetSymm's customizable UI, or transfers POs directly from Buyer ERP to Supplier ERP.

Process automation: Automate customer POs as sales orders in supplier's ERP. Map part numbers, UOMs, bill-to and ship-to codes, perform minimum order qty checks and process discounts.

VISIBILITY

Real-time: View transactions and data in real-time. Synchronize price list, inventory levels, product information, and customer information from supplier ERP.

Delivery and Status: Provide notifications on order status and delivery details and electronic invoices

Reporting & BI: Generate reports easily on demand and perform business analytics

EASE OF USE

Connectivity: Easily connects customers to your ERP system, using browser or portal.

Collaboration: Communicate and exchange documents and other information with your customers or suppliers

Accessibility: NetSymm can be accessed via cloud on laptop and mobile versions 24x7.

Security: Company and role based security.
